NARA

CREATIVE ONEPAGE PORTFOLIO TEMPLATE

DESCRIPTION

Nara is a clean and modern creative portfolio that is perfect to promote your work in a very professional and pleasant way.

Nara is made of HTML5 and CSS3. It is fully responsive; it looks stunning on all types of screens and devices (desktop, notebook, tablet and mobile).

Nara comes in three variations:

- Image Background.
- Video Background.
- Content Slider.

If you have questions about anything in Nara template, please send us an e-mail.

Have fun with your new template and thanks again for buying!

Note: some features will not work until you upload your file to your sever.

CUSTOMIZE

Changing Logo:

In order to change the logo, you'll need to replace the "header-logo.png" file in ->img->misc directory and yes: Nara does the resizing and everything!

HINT: same goes for the favicons in ->favicons directory.

Image Sizes:

You love how everything is beautiful and in the right place, we'll tell you our secret;

Follow these sizes and you don't have to worry:

- **Home Images: 1920x1200**

- **Works Grid Items: 800x800.**

- **Work Projects: 1060x598.**

- **Services: 440x440.**

- **Blog Articles: 1236x600.**

- **Team: 600x800.**

- **Clients: 470x320.**

Changing font:

Because we like quality font, we always prefer to use an embed font. But you can switch to any font of your choice.

If want to use one from Google Fonts copy the generated code to replace de following tag around line 33 on index.html, then in main.css search for font-family property and replace width the name of your chosen font.

Services Icons:

Nara comes with a gorgeous collection of icons, you can check the full collection by getting to font-> StrokeGap->demo.html

In order to change the service icon, copy the icon code and replace it in the <span element in the filter zone:

```
<li><span class="icon icon-Chart"></span></li>
```

Social Icons:

Because they look better than fonts, we uses images for social icons. You can change the icons based on your needs by changing the class name.

```
<li class="facebook" data-url="http://www.facebook.com/"></li>
```

Contact Email:

Open contact.php and change the email address with your own.

```
1 $to = 'contact@email.com'; // Replace with your email address
```
